

Ingestion Failure Report

All runs 2026-06-06 to 2026-09-21 · bronze ingestor

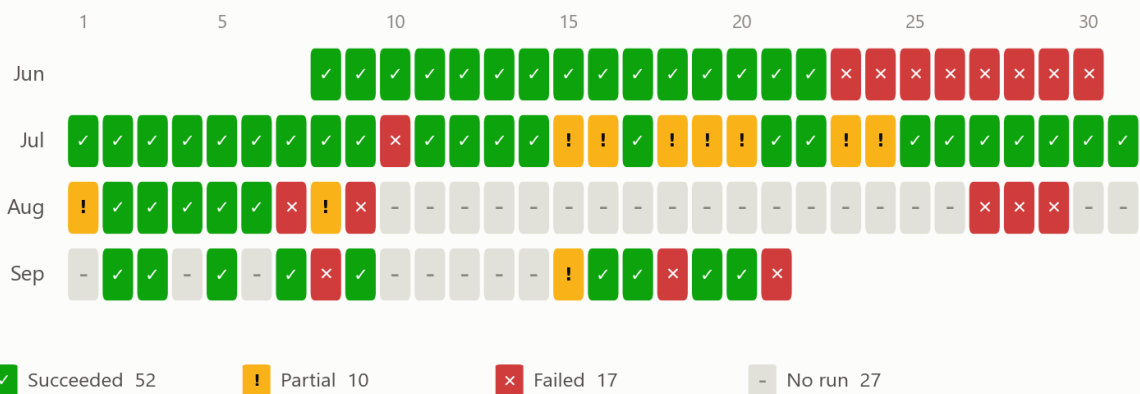

1. Summary

Run status	Count	Meaning
succeeded	73	All work finished; projection refreshed
partial	16	Run finished, some leagues/fixtures dead-lettered
failed	20	Run aborted; nothing ingested
running	1	ba83af6a orphan since 2026-06-18

110 runs in total. **27 days** had no scheduled run. **2,083 dead-letter rows** in total.

Scheduled run outcome by day

First scheduled run of each day, 08 Jun to 21 Sep 2026. A run later resumed to success counts as succeeded.

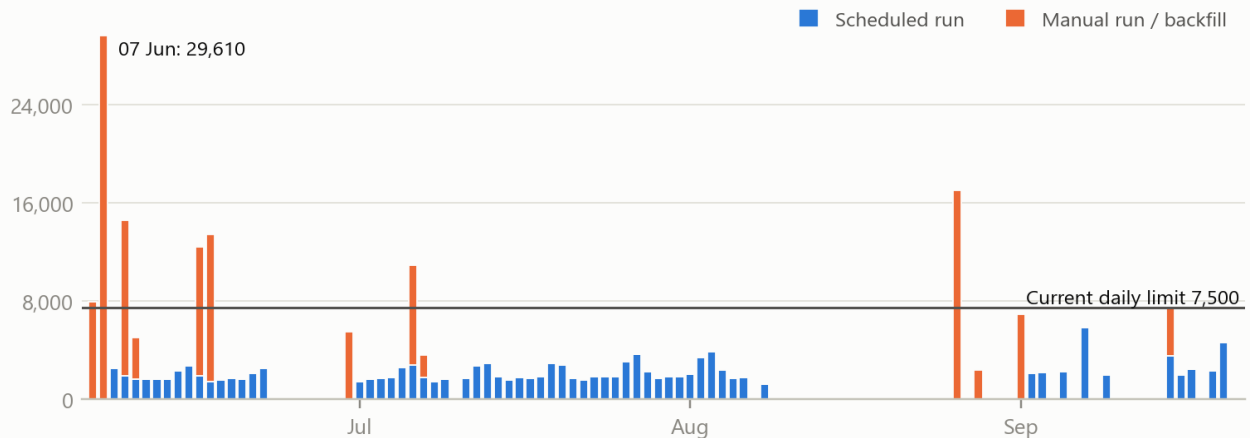

Findings (analysis of 2026-09-21)

- Daily quota is the #1 cause of total failures.** Every scheduled run that failed from 2026-08-07 to 2026-09-21 died within 60 s at the / Leagues bootstrap call. The API answered: *"You have reached the request limit for the day"*.
- The configured quota was 10× too high.** /status reported plan **Pro**, **limit_day = 7,500**, while .env had DAILY_QUOTA=75000 from the old Ultra plan, so the internal limiter never throttled. Now: DAILY_QUOTA=7,500.
- Backfills that ran past midnight used up the next day's quota.** 1e184047 (08-26 to 08-28) lines up with failed scheduled runs on 08-27 and 08-28. f0743395 (09-15 to 09-16) lines up with the failure on 09-16.
- The old 02:00 Berlin slot is exactly 00:00 UTC in summer**, when the daily counter rolls over. All 11 logged crashes were rejected between 00:00:14 and 00:01:42 UTC. The run moved to 07:00 Berlin on 2026-09-21.
- Subscription lapses:** the plan expired 2026-08-06. The run failed on 08-07 and 08-09, and on 08-08 the key was on a Free plan. The plan seen on 09-21 ends **2026-09-26**.
- Per-minute rate limiting** (HTTP 429 or in-body rateLimit) caused all partial runs, usually 1–11 items each.

2. Quota usage

Estimated API calls per day

Leagues + fixture tasks + 1 per run, from run counters, by the day the run started. Crashed runs count as 0. The limit was 75,000/day (Ultra) until 2026-08-06; the line shows today's limit from .env.

A scheduled run uses **1–5,865** calls (median 1,773), or up to 78% of the 7,500 daily limit. Any backfill on the same day has to fit in what's left, or it eats into the next day's quota.

Open question: on some days the scheduled run hit the limit even though the ingestor used well under 7,500 calls the previous UTC day. Either the API's counter resets some time after 00:00 UTC, or something else uses the key. Logging `x-rate-limit-requests-remaining` (task 0009) would settle it.

3. Whole-run failures

Causes come from the scheduler log's `run.crashed` events (analysis of 2026-09-21). **Status now** is live: a resumed run shows succeeded. Times are Berlin time.

Run	Started	Cause	Status now
d3f8301c . . 7ddb f576	06-23..06-30 (8 runs)	Log not retained; same fingerprint as quota/lapse (<1 min, 0 dead letters)	failed
6690374b	06-10 13:53	Manual backfill; aborted after ~20 h, 8 checkpoints pending	failed
006702be	07-06 11:58	Manual smoke test (task 0003)	failed
851d7576	07-06 21:27	Daily quota spent by 5 test runs that day (task 0007)	failed
a1144578	07-10 02:00	Network: DNS lookup failed (ConnectError)	failed
6ff51833	08-07 02:00	Daily limit; subscription expired 08-06	failed
272ad182	08-09 02:00	Daily limit; subscription lapsed	failed
41ff3688	08-27 02:01	Daily limit; backfill 1e184047 running across midnight	failed
74b4af46	08-28 02:00	Daily limit; backfill 1e184047 still running	failed
ed49dce2	08-29 02:00	Daily limit	failed
80a18644	09-08 02:00	Daily limit, after a 5,652-call day	failed
6e8e95b2	09-16 02:00	Daily limit; backfill f0743395 running across midnight	succeeded
28e903ea	09-17 02:00	Daily limit	succeeded

Run	Started	Cause	Status now
fb8b6227	09-18 02:00	Daily limit	failed
57c6e271	09-21 02:00	Daily limit	failed

Why retries don't help: the client treats the day-limit message as retryable. It retries / leagues 7 times over about 40 s and then crashes, but a daily limit won't clear in 40 s.

4. Partial runs and dead letters

Dead-lettered calls by cause

All 2,083 rows in dead_letter. Each is a league or fixture that a run gave up on after retries.

Run	Started	Dead letters	Causes
45e2af8b	06-06 16:15	2	Plan restriction (Free plan) (2)
fb68219c	06-06 17:10	2	Plan restriction (Free plan) (2)
998bfc38	06-06 20:34	121	Per-minute rate limit (109); Network (DNS) (12)
71395d64	06-07 04:00	748	Per-minute rate limit (748)
c7f82ae2	07-06 19:08	3	Per-minute rate limit (3)
4befe5d5	07-06 19:21	9	Per-minute rate limit (9)
a7ac629d	07-15 02:00	3	Per-minute rate limit (3)
86939f1f	07-16 02:00	1	Per-minute rate limit (1)
84152feb	07-18 02:01	8	Per-minute rate limit (8)
ab06f32d	07-19 02:00	3	Per-minute rate limit (3)
87f3a108	07-20 02:00	2	Per-minute rate limit (2)
e665bf8f	07-23 02:00	5	Per-minute rate limit (5)
189ffeaf	07-24 02:00	6	Per-minute rate limit (6)
206ad1f0	08-01 02:00	3	Per-minute rate limit (3)
893b6a9c	08-08 02:00	1,125	Plan restriction (Free plan) (1095); Per-minute rate limit (30)
e29ece1c	09-15 02:00	11	Per-minute rate limit (11)

5. Days with no scheduled run

These days have no scheduled run row at all, so the scheduler never launched the ingestor. The usual reason is that the PC or Docker Desktop wasn't running at the scheduled time. Backfill a gap with `--from/--to`.

```
08-10 .. 08-26 (17 days)
08-30 .. 09-01 (3 days)
09-04
09-06
09-10 .. 09-14 (5 days)
```

6. Runs since the analysis

No failed or partial runs since 2026-09-21 10:00.

7. Recommendations

#	Action	Status (09-21)
1	Move the cron from 02:00 to 07:00 Berlin	Done
2	Set DAILY_QUOTA to the plan's real limit (7,500)	Done
3	Renew the API-Football subscription before 2026-09-26	Owner action
4	Split backfills into date chunks that fit one day's quota, leaving ~3,000 calls for the scheduled run; never run them past 00:00 UTC	Practice
5	Make the day-limit response non-retryable: fail fast, record the reason	Coordinator task
6	Persist /var/log/ingest.log on a volume (recreating the scheduler wipes it)	Coordinator task
7	Log x-ratelimit-requests-remaining on each run (task 0009)	Backlog
8	Close orphan run ba83af6a (status running since 06-18)	Housekeeping
